

# **JAVA PROGRAMMING LAB**

## **(MCA 4241 )**

# Rules & Regulations

- Seating Arrangements
- Login Book Entry
- Mobiles in Class & Lab – Switch off mode.
- Lab Attendance- 85%
  - Totally 12 Labs including Final Lab exam.

# Rules & Regulations

- Managing missing Lab.
- Work extra time to complete the exercises and submit Lab Records.
- Inform faculty well before –Personally/ email regarding Absence.

# Lab Evaluation

## ➤ **Total Internal Evaluation – 60 Marks**

- 2 Evaluations of 20 marks
  - Record : 6 marks
  - Exe-check: 7 marks
  - Quiz: 7 marks
  
- 1 Mid-Term evaluation of 20 marks (approx. 6<sup>th</sup> lab)  
Write-up + execution

## **Lab End Semester Exam – 40 Marks**

# References

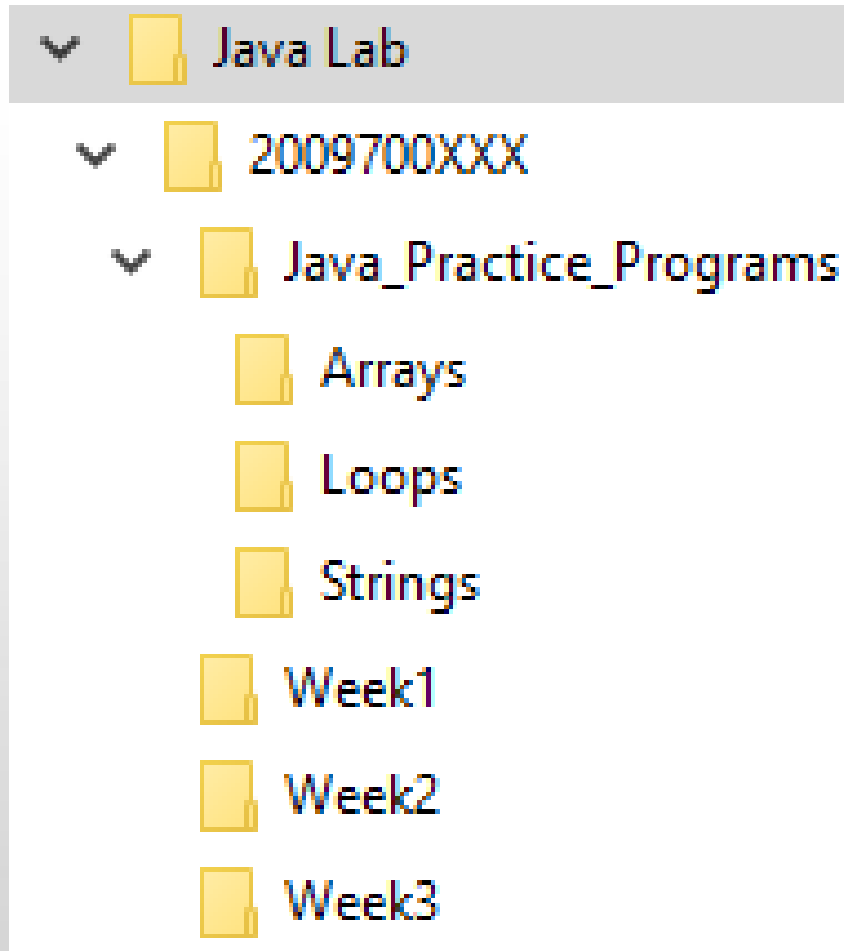

1. Herbert Schildt, *Java The Complete Reference*, 11<sup>th</sup> Edition, McGraw Hill, 2019.
2. Cay S. Horstmann. *Core Java: Volume I - Fundamentals*. 11<sup>th</sup> Edition, Pearson Education, 2018.

# Course Outcomes

1. Developing Java Applications based on basic programming concepts.
2. Understand the object oriented concepts of java.
3. Implement programs with other object oriented concepts such as – Inheritance, multithreading.
4. Read/Write using Java streams and error handling
5. Design GUI components with the Java Swings

# Saving Your Programs

Create folder with your Registration Number in D:\

Java Virtual Machine

Java Runtime  
Environment

Java Development Kit

Java Development Kit (JDK)

Java Runtime Environment (JRE)

Java Virtual Machine (JVM)

$\text{Jre} = \text{jvm} + \text{library classes}$

$\text{Jdk} = \text{jre} + \text{development tools}$

## Example 1

```
class Example
{
    public static void main(String args[] )
    {
        System.out.println ("Hello Welcome");
    }
}
```

Note : String, System

class name is same as file name with the extension .java

# How to set path in Java

The path is required to be set for using tools such as `javac`, `java`, etc.

# How to set the Temporary Path of JDK in Windows

- Open the command prompt
- Copy the path of the JDK/bin directory
- Write in command prompt: set path=copied\_path
- For Example:
  - **set path=C:\Program Files\Java\jdk1.6.0\_23\bin**

```
C:\new>javac Simple.java
'javac' is not recognized as an internal or external command,
operable program or batch file.

C:\new>set path=C:\Program Files\Java\jdk1.6.0_03\bin

C:\new>javac Simple.java

C:\new>java Simple
Hello Java

C:\new>■
```

## 2) How to set Permanent Path of JDK in Windows

For setting the **permanent path** of JDK, you need to follow these steps:

Go to My Computer properties → advanced tab

→ environment variables

→ new tab of user variable

→ Edit the path variable

→ write path of bin folder in variable value

→ ok → ok → ok

Now your permanent path is set.

You can now **execute any program of java from any drive.**

# Compiling & Executing Java Program

```
C:\>jdk1.8\bin\    edit Example.java
```

```
C:\>jdk1.8\bin\    javac Example.java
```

```
C:\> jdk1.8\bin\    java Example
```

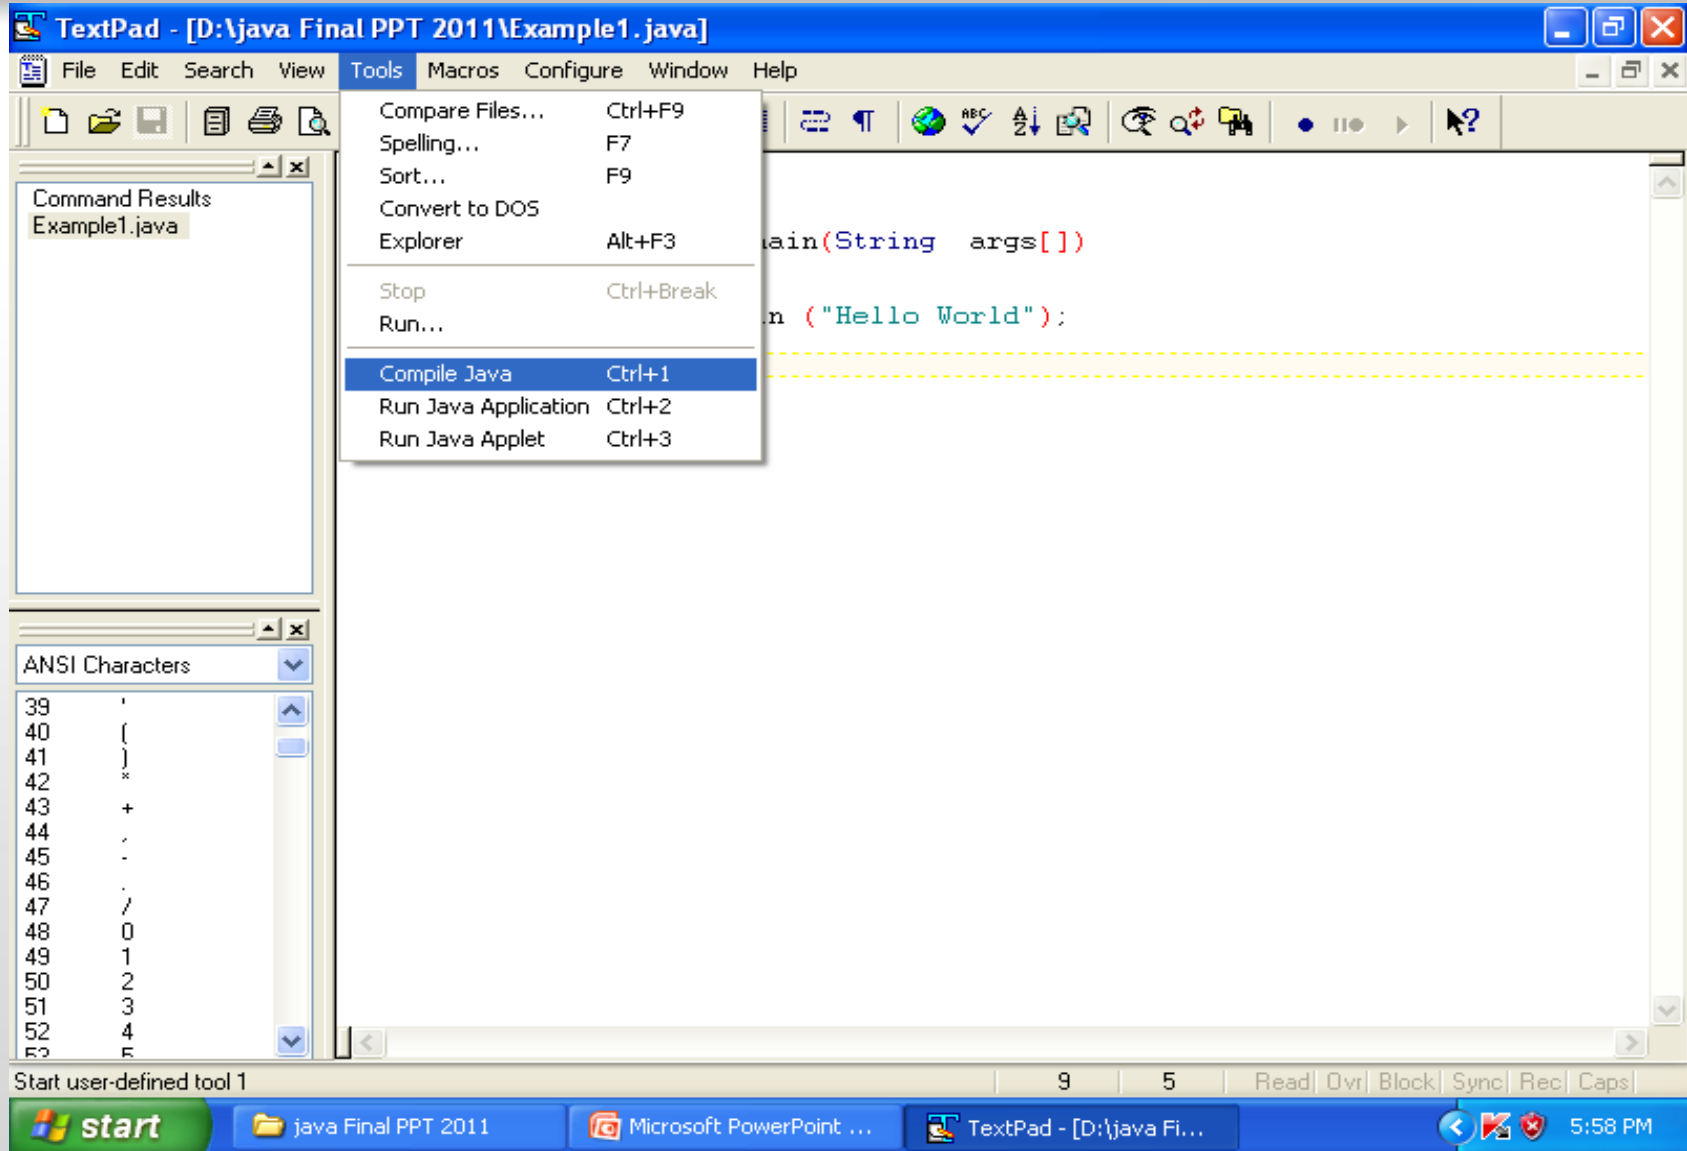

```
Hello World
```

# Using TextPad

## Example2 : Variable Declaration

```
class Example2
```

```
{    public static void main(String args[])
    {        int a,b,c;
              a=2;
              b=3;
              c = a+b;
              System.out.println(c);
              System.out.println("sum is"+c);
              System.out.println("sum of"+a+"and"+b+ "is"+c);
    }
}
```

**OUTPUT :** 5

sum is 5

Sum of 2 and 3 is 5

## Example2 : Variable Declaration

```
class Example2
```

```
{    public static void main(String args[])
    {        int a,b,c;
              a=2;
              b=3;
              c = a+b;
              System.out.println(c);
              System.out.println("sum is"+c);
              System.out.println("sum of"+a+"and"+b is"+c);
              System.out.println("sum of"+ (a+b));
    }
}
```

**OUTPUT :** 5

sum is 5

# Data Types and Variables

## □ Primitive Data Types

- **Integers**: byte 8, short 16, int 32 and long 64

- ▶ Java does not support unsigned integers

Name	Width in bits	Range	
long	64	-9,223,372,036,854,775,808	9,223,372,036,854,775,807
int	32	-2,147,483,648	2,147,483,647
short	16	-32,768	32,767
byte	8	-128	127

- **Floating-Point**: float 32, double 64

Name	Width in bits	Approximate Range	
double	64	4.9e-324	1.8e+308
float	32	1.4e-045	3.4e+038

- **Character**: char 16 (Unicode)
- **Boolean**: boolean 8 (true, false)

## Reading input from keyboard

```
int a;
```

```
Scanner sc = new Scanner(System.in);
```

```
a = sc.nextInt();
```

### **1) int nextInt()**

It is used to read an integer value from the keyboard.

### **2) int nextFloat()**

It is used to read a float value from the keyboard.

### **3) long nextLong()**

It is used to read a long value from the keyboard.

### **4) String next()**

It is used to read string value from the keyboard.

```
import java.util.Scanner;
```

```
import java.util.Scanner;

class prg3
{
    public static void main(String args[])
    {
        int a,b,c;

        Scanner sc = new Scanner(System.in);

        System.out.println("Enter a first number");

        a = sc.nextInt();

        System.out.println("Enter a second number");

        b = sc.nextInt();

        c = a+ b;

        System.out.println("sum is :"+c);

    }
}
```

```
import java.util.Scanner;
class GetInputFromUser{
    public static void main(String args[]) {
        int a;
        float b;
        String s;
        Scanner in = new Scanner(System.in);
        System.out.println("Enter a string");
        s = in.nextLine();
        System.out.println("You entered string "+s);
        System.out.println("Enter an integer");
        a = in.nextInt();
        System.out.println("You entered integer "+a);
        System.out.println("Enter a float");
        b = in.nextFloat();
        System.out.println("You entered float "+b);
    }
```

# Data Types and Variables

## □ Variables

□ Syntax: type identifier [= value][, identifier [=value]...];

□ Examples:

```
int a, b, c;
```

```
int d = 3, e, f = 5;
```

```
byte z = 10;
```

```
double pi = 3.14159;
```

```
float k = 3.56f;
```

```
char x = 'x';
```

□ Types of variables

- ▶ Local variables
- ▶ Instance variables
- ▶ Class / Static variables

# Arithmetic Operators

Operator	Result
+	Addition
-	Subtraction (also unary minus)
*	Multiplication
/	Division
%	Modulus
++	Increment
+=	Addition assignment
-=	Subtraction assignment
*=	Multiplication assignment
/=	Division assignment
%=	Modulus assignment
--	Decrement

# Example

// Demonstrate the basic arithmetic operators.

```
class BasicMath
```

```
{    public static void main(String args[])
    {    System.out.println("Integer Arithmetic");
        int  a = 1 + 1;
        int  b = a * 3;
        int  c = b / 4;
        int  d = c - a;
        int  e = -d;
        System.out.println("a = " + a);
        System.out.println("b = " + b);
        System.out.println("c = " + c);
        System.out.println("d = " + d);
        System.out.println("e = " + e);
    }
}
```

# The modulus operator

// Demonstrate the % operator.

```
class Modulus
```

```
{    public static void main(String args[])
```

```
{
```

```
    int x = 42;
```

```
    double y = 42.25;
```

```
    System.out.println("x mod 10 = " + x % 10);
```

```
    System.out.println("y mod 10 = " + y % 10);
```

```
}
```

```
}
```

output:

x mod 10 = 2

y mod 10 = 2.25

# Relational Operator

Operator	Result
==	Equal to
!=	Not equal to
>	Greater than
<	Less than
>=	Greater than or equal to
<=	Less than or equal to

## Boolean Logical Operators

Operator	Result
&	Logical AND
	Logical OR
^	Logical XOR (exclusive OR)

# Decision Structures

if (condition)

statement;

else if (condition)

statement;

statement;

# Java program to illustrate if-else-if ladder

```
class ifelseifDemo
{
    public static void main(String args[])
    {
        int i = 20;

        if (i == 10)
            System.out.println("i is 10");
        else if (i == 15)
            System.out.println("i is 15");
        else if (i == 20)
            System.out.println("i is 20");
        else
            System.out.println("i is not present");
    }
}
```
